topology is a branch of mathematics that studies the properties of spaces that are preserved under continuous deformations such as stretching or bending but not tearing or gluing it focuses on concepts like continuity open and closed sets compactness and connectedness without relying on exact measurements like distance or angles a key idea is the topological space a set with a structure that defines which subsets are open two spaces are considered topologically equivalent homeomorphic if they can be transformed into each other through continuous functions with continuous inverses topology has various branches including point set topology algebraic topology and differential topology and it plays a foundational role in fields like geometry analysis and theoretical physics starts with point set topology basic definitions open closed sets interior closure boundary etc pearsoned co in moves on to continuous functions and homeomorphisms metric spaces pearsoned co in key

topological properties connectedness compactness pearsoned co in advanced topics applications knots robotics graphs manifolds embeddings fixed point theorems homotopy theory degree theory pearsoned co in also includes topics like dynamical systems and chaos

constraints have emerged as the basis of a representational and computational paradigm that draws from many disciplines and can be brought to bear on many problem domains this volume contains papers dealing with all aspects of computing with constraints in particular there are several papers on applications of constraints reflecting the practical usefulness of constraint programming the papers were presented at the 1998 international conference on principles and practice of constraint programming cp 98 held in pisa italy 26 30 tober 1998 it is the fourth in this series of conferences following conferences in cassis france cambridge usa and schloss hagenberg austria we received 115 high quality submissions in addition 7 abstracts submissions were not followed by a full paper hence were not counted as submissions the program committee selected 29 high quality papers after thorough refereeing by at least 3 experts and further discussion by committee members we thank the referees and the program committee for the time and effort spent in reviewing the papers the program committee invited three speakers joxan jar pater jeavons patrick prosser their papers are in this volume

the contributors to this volume draw upon the experiences of environmental regimes to examine the problems of international governance in the absence of a world government

1.1 power dissipation trends in cmos circuits shrinking device geometry growing chip area and increased data processing speed performance are technological trends in the integrated circuit industry to enlarge chip functionality already in 1965 gordon moore predicted that the total number of devices on a chip would double every year until the 1970s and every 24 months in the 1980s this prediction is widely known as moore's law and eventually culminated in the semiconductor industry association sia technology road map 1 the sia road map has been a guide for the industry leading them to continued wafer and die size growth increased transistor density and operating frequencies and defect density reduction to mention a few numbers the die size increased 7 per year the smallest feature sizes decreased 30 and the operating frequencies doubled every two years as a consequence of these trends both the number of transistors and the power dissipation per unit area increase in the near future the maximum power dissipation per unit area will be reached down scaling of the supply voltage is not only the most effective way to reduce power dissipation in general it also is a necessary precondition to ensure device reliability by reducing electrical fields and device temperature to prevent device degradation a drawback of this solution is an increased signal propagation delay which results in a lower data processing speed performance

in spite of the lack of plausible alternatives to liberal democracy the age of globalization has ushered in serious challenges to the democratic legitimacy of the nation state the contributors in this collection explore the frontiers of normative and

empirical legitimacy research drawing upon a range of key conceptual and methodological issues

enduring liberalism pursues two objectives one it explores the political thought of public intellectuals and the general public since the 1960s two it assesses contemporary and classic interpretations of american political thought in light of the study s findings book jacket
